

↑ User accessibility for people living with dementia and their carers

1. I removed auto rotate to stop the screen moving with hand movement.
2. We removed screen lock so that the person can easily access it.
3. I made the font size ~~the same~~ larger for clearer visual^{of text}.
4. I increased the sleep mode time to 10 minutes to allow the person to move at their own pace.
5. I made the desk display larger to make the icons easier to read.
6. I've removed or decluttered all the irrelevant apps so it does not distract the user on the homepage. In addition this prevents the user from mistakenly pressing something wrong.
7. I have made adjustments to the wallpaper (by so making the wallpaper plain) to help the user not get confused.
8. I removed all apt apps to not distract the user.
9. I connected tablets to dongles because some users don't have access to wifi at home.
10. I have removed notifications (including google assistant) not to disturb ~~inconveniences~~ ^{person} the ~~user~~.
11. I have added "magnification button" so the person for people with visual impairment.

- 12. I added the battery percentage on the status bar so that the ~~worries~~ person knows ~~how much~~ when the device needs charging
- 13. I have ~~added~~ turned on the 'tap to wake' so the person knows the tablet is still on (sleep mode) and can tap to return to where & He/she last was was last using it.
